

My Developer Story

YOHANNES B.

1. I did some java coding on linux many years ago.
2. My first html coding was done using Microsoft Frontpage as editor.
3. When I found out about themes, I took a shortcut and started using **wordpress/wix** themes to make a website
4. Using themes was easy, but I learned nothing from them.
5. With the help of Refcode, I am learning again how to code, and how to build a website from scratch using *HTML, CSS, JS* without depending on readymade themes.
